

Call for entries

The **aqua_M AWARD** is a research prize which, in order to promote young scientists, honours projects that have worked on future proof methods, techniques and management tools for securing groundwater resources in times of climate change and changes in population structures in urban areas.

The competition topic for the Award in 2022 will be:

Extreme weather conditions

e.g. recording and evaluation of as well as approaches to solutions regarding the resources, the water supply technology and the consumption behaviour

e.g. perception of weather and climate and impacts on the water consumption behaviour

Virtual water

e.g. the regional origin of everyday products challenges for the production influence on the consumption behaviour

What is being looked for are innovative approaches to concepts that can be integrated and implemented in the structures and processes of municipal water supply. The following aspects should be addressed in the submitted work:

- Use and protection of water resources in times of climate change
- Consumers' response to the consequences of climate change
- Definition of solutions for the adaptation of water utilities to climate impacts

The application period for participation in the Award begins on 1st March and ends on 30th of September 2022.

The **aqua_M Award** is awarded with prize money of EUR 7,000.

The Award is open to participants of all academic levels (at least Bachelor's degree) of all gender identities from Germany, Austria, Switzerland, the Netherlands, Belgium, Luxembourg, or France without discrimination. The submitted entry must have been written in the context of a doctoral, master's, bachelor's or seminar thesis and must be clearly related to the competition topic.
